

Date	System	Instrument	Experience	Remarks
May-Jul	Up/Down Fractals 1-min, 3-min & 5-min	ES PT/SL 4/8	1 tick above or below for breakout trades I considered mostly 3- and 5-minute signals Sim-traded for a few weeks	
Aug-Nov	Up/Down Fractals + RVB Bar/MA Lines 1-min, 3-min & 5-min 133 ticks & hourly	YM PT/SL 5-7 / 15-20	1 tick above or below for breakout trades Mostly 5-minute and 133-ticks for signals 2-3 trades a day and unfortunately the ones I entered were mostly fake-out ones	Was in the PureTick trading room for about 2 months Was in my trading friends' trading room for about 3 months
Nov-Dec	Kwik Pop 7500 & 3350 Volume DIA 200 ticks filter	ES PT/SL 4/12	Very specific entry and exit rules Exit B/E or 1-2 ticks with warnings on the 3350 Volume chart Lots of whipsaws when the market was undecided	Was in the KP room for daily orientation for about 2 months
Dec-Feb	The Wizard Hopping Clouds 4- & 6-MedianRenko	YM PT/SL 5/10-15	Very specific entry and exit rules Particularly like the blue/red dots to tell me where to put SL Often late to enter and/or limit orders not filled (market order may be the solution)	Jan sim-trade month was over 90% Green Did real trades 1-5 Feb was devastating, ie I did not follow any rules at all!
Feb	The Wizard Hopping Clouds	YM	My automation effort so that it might capture the signals more promptly Do not have the skills to do so	
Mar-Jun	Back to System Search Kwik Pop Perry's System PriceActionSwing Market Profile	ES PT/SL 4/6-8	I did and still like Kwik Pop because of its specific rules esp early exit with warnings Started learning Price Action and Market Profile Tripped over Perry's thread and started sim-trading the original method Located Jeff's Three Set Ups thread in mid Jun and love-at-first-night on the Inside Bar set up	Apr-Jun were the most occupied months learning multiple systems/tools Sim-trade results: At least 80% profitable
Jul	Inside Bar 15-minute CCI Continuation	CL PT/SL 8/15-25	Extremely easy to learn and implement Risk-reward ratio not within reach at this point Learned about CCI Continuation set up and studied it (incl Woodies) for some weeks	Trades over 90% profitable Only a few SL though they wiped out over 60% of the monthly gains
Aug	Back to Perry's System from 4-Range to 15-RangeAlt Primary: Method 1 w modification Secondary: 5-min PASwing 15-min Inside Bar 30-min Market Profile	ES for a few days PT/SL 4/6 Then TF PT/SL 4/6 (4R) PT/SL 10/13 (15R)	Replaced the original method with Method 1 Switched from ES to TF because ES pace has been too slow Realized my scalper preference Learned to use charts of multiple timeframes Recently added VolumeStop indicator to the 5- and 15-min charts Automated Method 1 (incl my preference) to better understand the entry requirements	Sim-trade results: between 80-85% profitable
