In a Nutshell

The awxEconomicNews indicator shows the current day's economic news on your trading chart. It allows you to select the news items you are interested in seeing, and configure the fonts and colors you want to use for your news feed. The feed synchronises once a day to ensure that you have the latest news at your fingertips.

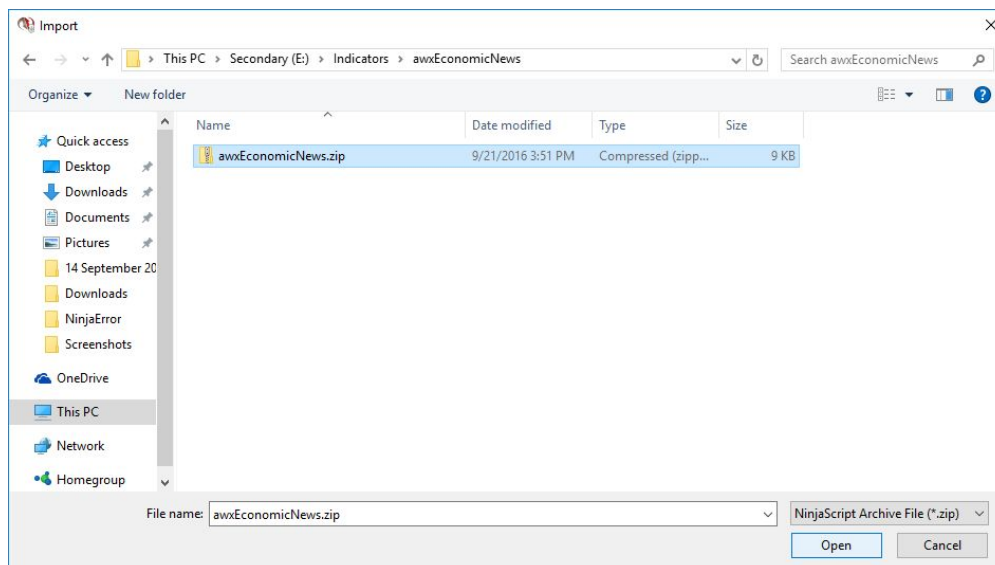

Installation

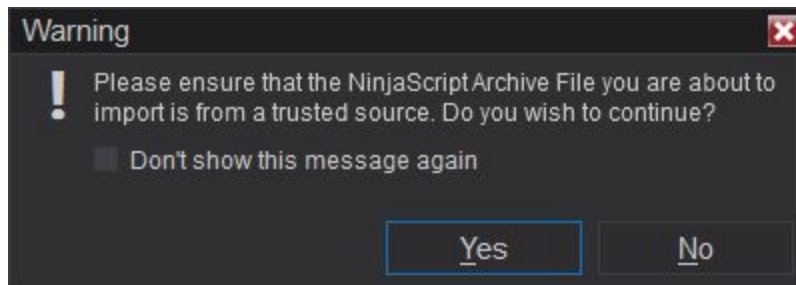

To install the indicator in Ninjatrader 8, click on the Tools->Import-Ninja Script... menu item in the Ninjatrader 8 Control Center.

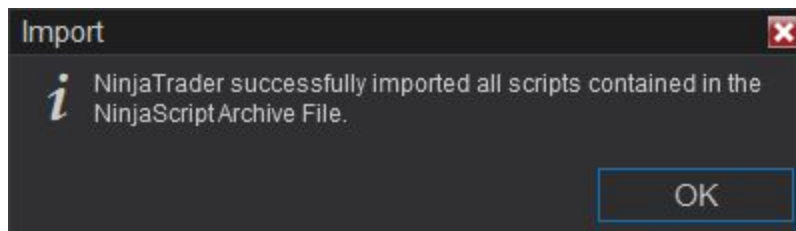

Next navigate to the location where you saved the .zip file for the indicator, select the file and click the Open button.

Ninjatrader will warn you to ensure that you only import indicators that you know the source of and trust, click Yes on this dialog.

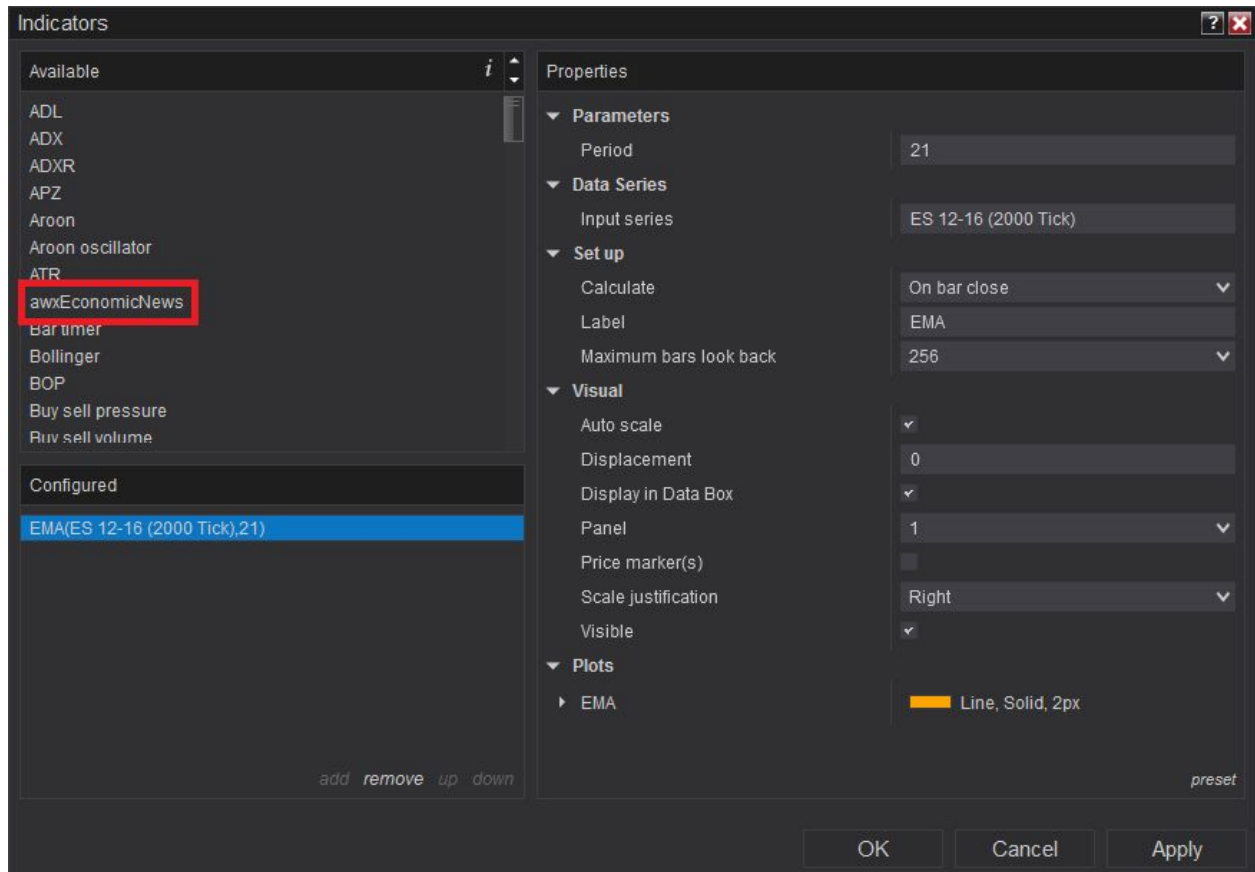

The below dialog box indicates that the indicator was successfully imported. Click the Ok button and you are ready to see the news on your trading chart!

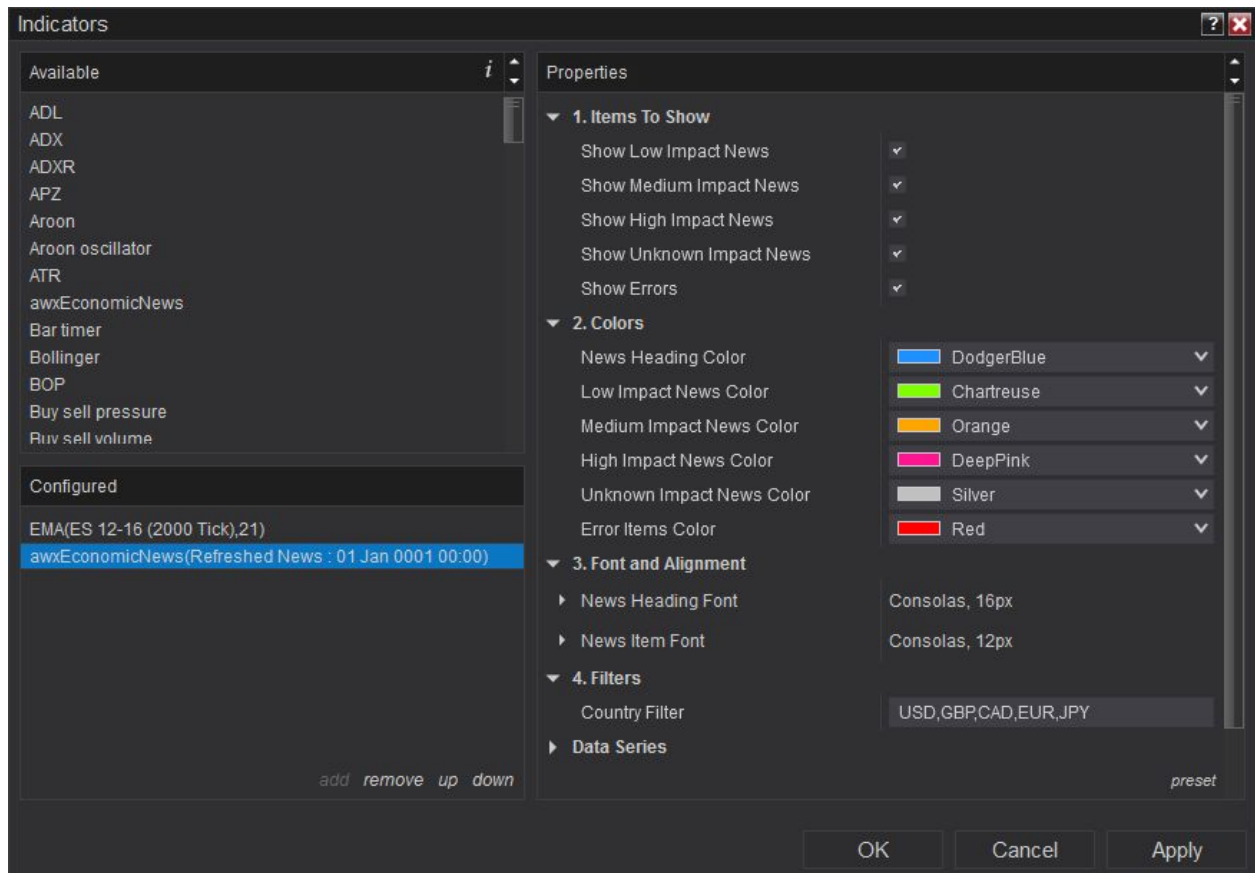

Configuration

Now that you have successfully imported the awxEconomicNews indicator, you are ready to put it on your chart. Open a new chart from the Control Center and click the Indicators button. You should now have the awxEconomicNews indicator in your list of available indicators.

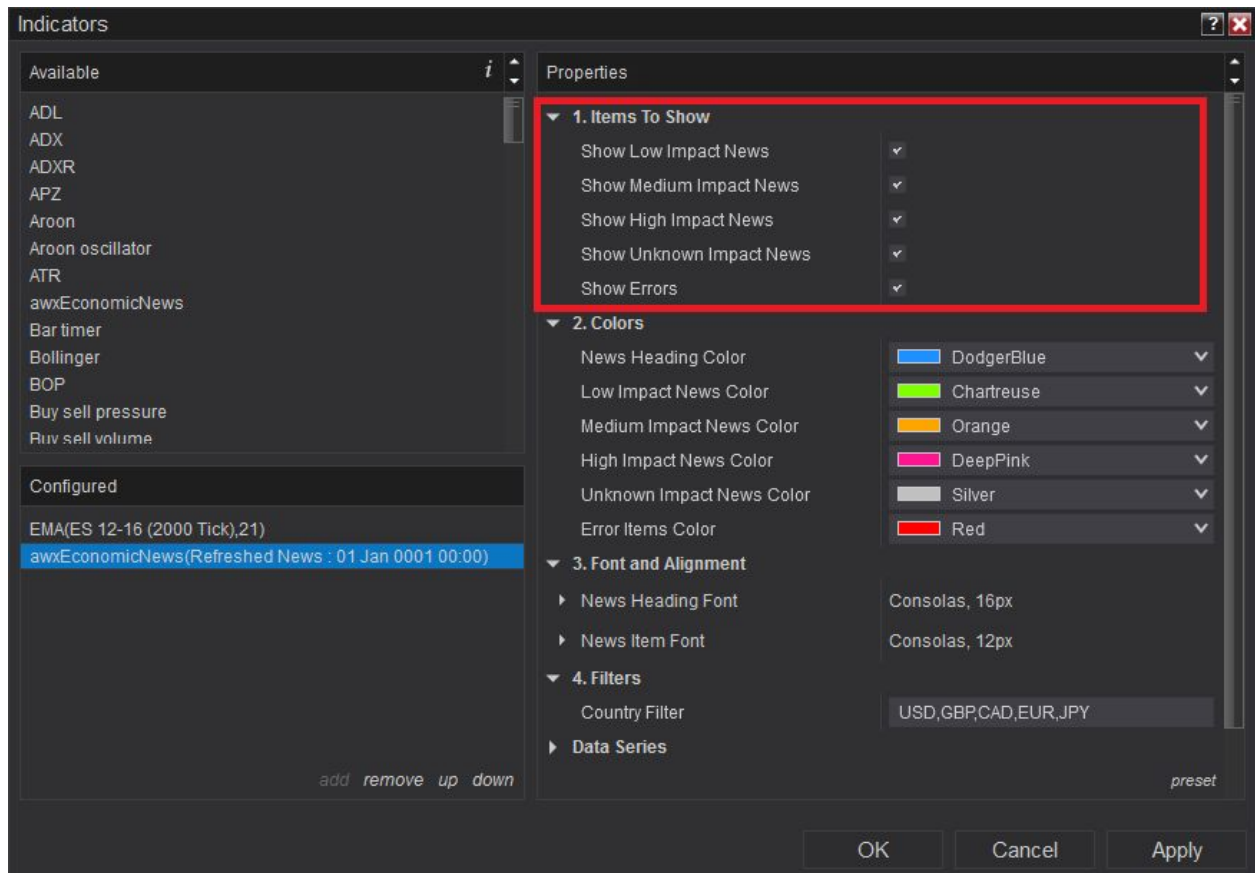

Double click the indicator to add it to the list of indicators on your chart and you are ready to configure what you want to see.

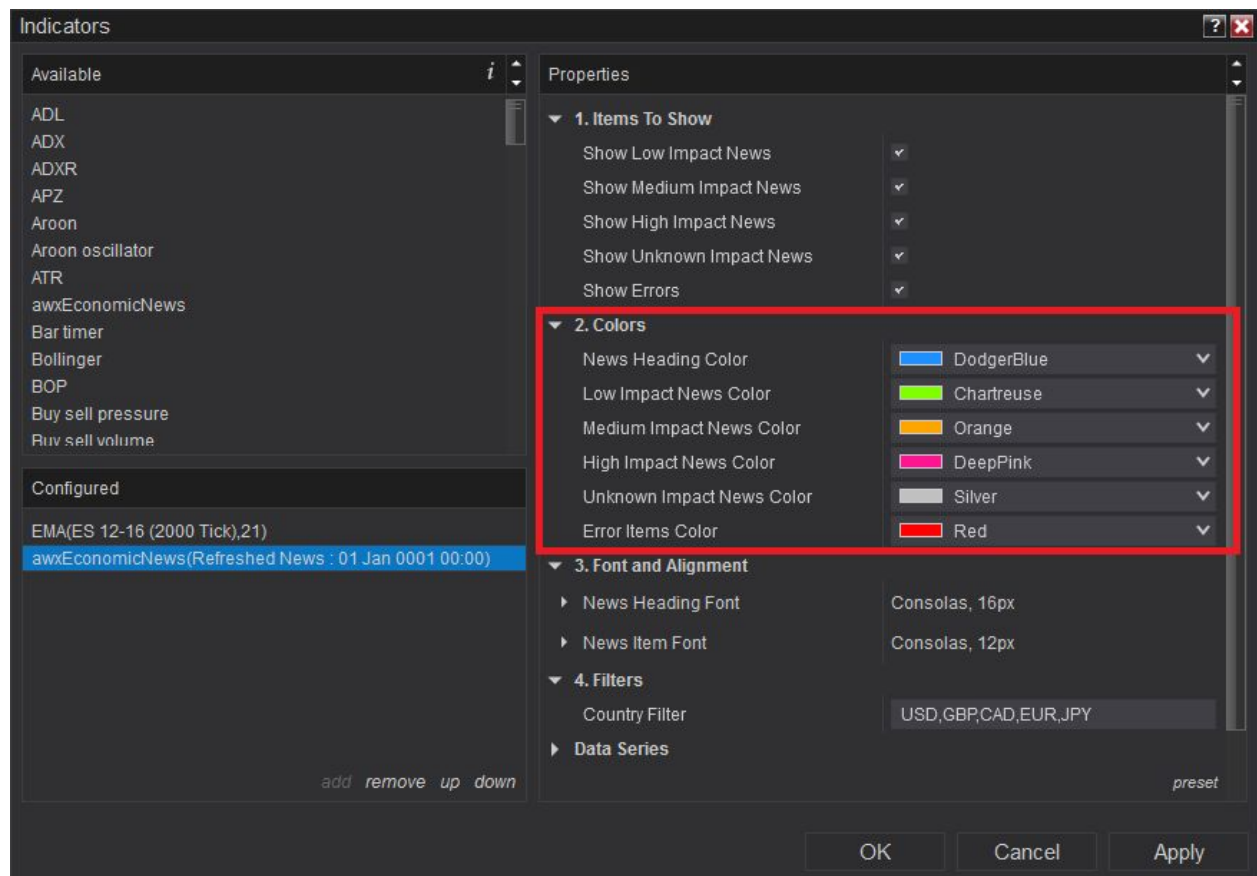

What would you like to see?

The news feed shows items with different market impacts in one glance. You can choose which items you would like to see by checking the different types in the “1. Items To Show” section on or off. It is recommended that you leave the “Show Errors” check box on in case any errors occur while retrieving news items.

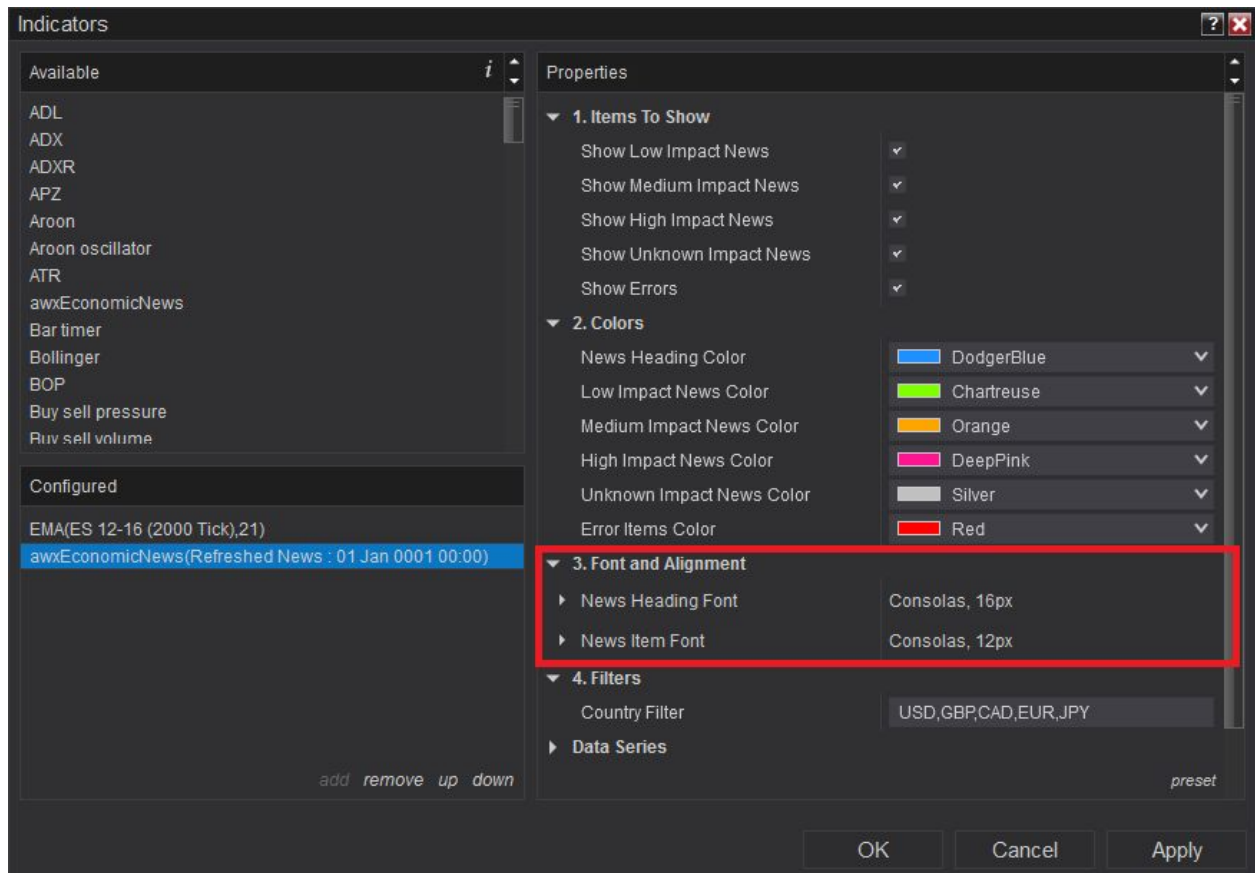

Color me Beautiful

The indicator was written in such a way that you have full control over the way you want to see your news feed. The color section allows you to choose the colors that makes the most sense to you and will get your attention for the news items you want to see. You can change any of the item colors by clicking on the drop down box for the item you want to change and choosing any of the available colors.

See it Clearly

You can choose the fonts that you would like to use to display your items and news header in the “3. Font and Alignment” section of the indicator configuration. Just a note, fixed width fonts like the default configured Consolas font work the best for the clearest results. To change any of the fonts, click the down arrow next to the item you want to change and choose your font and font style.

Only Interested in News for Specific Countries?

The last section of the indicator allows you to configure which countries you are interested in seeing news for. The default list contains all the countries (their currency codes) that news is available for. If you want to change the list and limit it to certain countries, simply remove the ones you are not interested in. Please ensure that you keep commas between the different codes with no spaces in between.
