I drew the channel to give a wider perspctive as we can see the reverse trend line is now at the 1390 area or so and not hovering I mentioned in ysterdays newsletter hovering near the up reverse trend line shows lack of selling. Now market can relieve over bought conditons by sideways action with no supply . Since the trend is up thats most likely the case As long as the retest of the 1252 area hold with no supply the market is okay But use caution
wider from rtl line
