NinjaTrader Version 7.0.0.6 Beta Release 6 - December 21st, 2009

Status	Issue #	Category	Comments
Added	3265	IB adapter	Added support for SFB and OMX exchanges and SEK currency.
Improved	3198	Strategy Analyzer	Select strategy settings are maintained in the strategy grid after compiling
Improved	3207	IQ Feed adapter	Updated to latest IQFeed API which supports 64-bit. **Users must upgrade to** 4.7.0.3 IQFeed Client Software **and add their user name/password to the Connection Wizard.**
Changed	3228	Charts	HeikenAshi now supports the same chart styles as minute bars.
Fixed	3166	PFG adapter	Now would reset internal position calculations and order states on server reset. **Users must upgrade to latest** PFGBEST.com API
Fixed	3194	General	Global sim mode did not work as expected.
Fixed	3195	Help Guide	Help window still was modal to CC, when activated by Help->Help
Fixed	3196	Strategy Wizard	Strategy wizard could produce non-compilable code when manipulating int/double on min or default values.
Fixed	3197	PFG Adapter	Historical minute and daily requests did not work as expected.
Fixed	3199	Charts	Opening property dialog for an object attached to custom indicator with empty result of ToString(...) method could crash NT.
Fixed	3200	NinjaScript	DrawTextFixed methods did draw outline and back rectangle with an incorrect offset.
Fixed	3201	Historical Data Manager	Made metastock import more error tolerant regarding uppercase/lowercase filenames.
Fixed	3202	Charts	CandleOutlineColor set from script was ignored for the color of candle wicks when wick color was set in bar series settings.
Fixed	3203	Charts	FisherTransform indicator was not TickSize sensitive.
Fixed	3204	Historical Data Manager	Daily bars built from tick or minute data were not correctly time stamped
Fixed	3205	Data Server	Daily data was incorrectly built.
Fixed	3206	NinjaScript	Using custom series on a multi-series indicator/strategy could cause exceptions.
Fixed	3208	Charts	Selecting an bar series or indicator with drawing tool 'ruler' selected was not possible when chart's bar series selection property was false.
Fixed	3209	Data box	Coloring issues on data box and mini data box.
Fixed	3210	Market Replay	Available data" was not updated as data down downloaded again.
Fixed	3211	Charts	PnF charts loaded from cache could hang NT
Fixed	3212	Charts	Enabled TickCounter indicator for tick based period types. Does not work for PnF, Kagi and LineBreak.
Fixed	3213	Charts	Applying chart template with less panels than already on chart could crash NT.
Fixed	3214	Charts	Data in display box of ruler has been off when only 2nd ruler anchor was moved.
Fixed	3215	Charts	VolumeUpDown could paint bars with 2 colors and 2 labels instead of one color per bar and 1 price label.
Fixed	3216	Charts	On switch of period type in bars data dialog, if new period type has no defaults, and new period type supports candle stick as chart style, take candle stick.
Fixed	3217	Charts	If ruler drawing tool is selected, and only one bar series/indicator is on panel, series is auto selected and ruler starts drawing immediately, instead of selecting the series only.

Fixed	3218	Charts	Trade lines didn't display properly on chart after walk forward optimizer in strategy analyzer.
Fixed	3219	Drawing objects	Show text in properties did not work for Andrew's pitchfork, Fibonacci time extension, Fibonacci circle and Gann fan.
Fixed	3220	Strategy Analyzer	Switched a couple of currency cells on the grids to fixed '$'.
Fixed	3221	Charts	Zooming or panning a chart in x/y-axis didn't work when a locked and selected drawing object was on chart.
Fixed	3222	Drawing objects	Slope of global chart objects could be off when anchor time are before first bar of chart.
Fixed	3223	Charts	Colors of a multi color plot indicator could be wrong when only color of some parts were set.
Fixed	3224	Data box	Chart data box and mini data box displayed indicator values though if it wasn't defined for that bar
Fixed	3225	Charts	Bar color of OHLC chart style could be off when extremely zoomed out.
Fixed	3226	Drawing objects	Opening properties dialog on global chart object with anchors partially off bars (e.g. before first bar) could crash NT.
Fixed	3227	SuperDOM	SuperDOM PnL did not update properly when market depth was disabled and PnL was using bid price instead of last price for calculations
Fixed	3229	Charts	New->Chart dialog was not sensitive on the selected exchange of instruments added to instrument lists.
Fixed	3231	Charts	Resizing non equidistant chart with 'show toolbar' set to false did shrink/expand bars instead of leaving distance between them constant.
Fixed	3232	Charts	Left price markers on bar series or indicators could be displayed though there was no left y axis.
Fixed	3233	NinjaScript	Time/Times property did not return end-of-session timestamps for daily bars.
Fixed	3234	IB adapter	Amended handling on pacing violations
Fixed	3235	NinjaScript strategies	Explicit exit orders could cause an "Order quantity has to be greater than 0" error.
Fixed	3236	ATM strategies	ATM strategies had not been properly recovered on reconnect.
Fixed	3237	General	Revised approach to resolve DB.ExecutionUpdate exceptions.
Fixed	3239	General	Default property settings for various UI had not been maintained across sessions.
Fixed	3240	Strategy Analyzer	Walk forward no longer properly had been using the optimization period as sync up period.
Fixed	3241	Hot Key Manager	Hot Key Manager no longer would allow assigning mouse buttons.
Fixed	3242	Charts	Loading bar series before session begin on rollover date of future with merge settings set to 'merge backadjusted' or 'merge non backadjusted' could hang NT.
Fixed	3243	Charts	Chart style default had not been applied correctly.
Fixed	3244	Charts	Last session break line on equidistant charts did plot on second bar of new live session, not on first.
Fixed	3245	Market Analyzer	Infinite historical market data requests
Fixed	3246	Strategy Analyzer	Could crash on compiling a strategy.
Fixed	3247	Charts	VolumeProfile indicator: Diamond was missing as it started recording.
Fixed	3248	Historical Data Manager	Changed warning logic on download in case not for all instruments data could be downloaded.
Fixed	3249	Charts	Replaced Renko implementation by user contributed code.
Fixed	3250	Charts	Chart settings on workspace could be overwritten with chart defaults on open/switch workspace.
Fixed	3251	General	Revised NT internal help system
Fixed	3252	Session Manager	Session definitions which would fall into the "1 hour gap" on switching from standard to daylight saving

			time could cause exceptions.
Fixed	3253	Charts	Bar series with period type days 2 and higher (also weekly, monthly, ...) could have been build wrong for futures instruments with merge settings true and for series build to the actual date.
Fixed	3255	Data server	Requests for historical data could kill the connection in case the instrument was not in the server repository.
Fixed	3256	Charts	Rolling the from data of bar series on charts didn't work properly for charts which left open over midnight.
Fixed	3257	Charts	Fixed scale is not reset to automatic when reloading historical data, on connect or when a new bar series is added.
Fixed	3258	General	Enhanced tracing during db migration NT6.5 -> NT7
Fixed	3259	Historical Data Manager	Memory leak when import tick data if generate minute or daily bars was checked.
Fixed	3260	Market Replay	Rewinding/restarting did not properly restart running strategies and could result in DB errors.
Fixed	3261	Charts	Using a chart template with fixed panel scale which was saved during e.g. German language settings active could screw panel scaling.
Fixed	3262	IB adapter	A 60 day request for 1 minute data could have forced pacing violations.
Fixed	3263	Charts	Chart panel properties: setting a horizontal grid line value and setting a very high value for Fixed max right could hang NT.
Fixed	3264	Database	Opening a database with file size larger than 256 MB did crash NT. Also migrating from a NT6.5 database with size larger than 256 MB did not work.
Fixed	3266	Charts	Global cross hair displayed two y axis price labels with price label being off on receiving charts.
Fixed	3267	Drawing objects	Inside right property of Fibonacci extension didn't work properly if extend right was set to false.
Fixed	3268	Charts	Pivots and WoodiesPivots: Loading the additional daily data series could screw up NT internal series management.
Fixed	3269	Charts	Avoid super fluent bars requests from provider/repository on applying chart template on new chart.
Fixed	3270	Market Analyzer	Cell color conditions did not work as expected
Fixed	3271	Charts	Copy/paste of drawing objects didn't work properly on equidistant charts with non equally distributed bar times (e.g. 10.000 volume)
Fixed	3272	General	License restrictions did not always apply as license changed from sim to direct edition.
Fixed	3273	Market Replay	Moving slider in MR could remove chart object which should be drawn by indicator/strategy on last bar of chart or execution which should be created by strategy also on last bar of chart.
Fixed	3274	Charts	Changed the sequence on which side of the receiving chart (which both scales) the value from the sending chart (which both scales) is displayed.
Fixed	3275	Charts	If scale was reset from fixed to automatic and new label width was smaller, there could have left a white margin which was too large.
Fixed	3276	Chart Trader	Chart Trader bid/ask labels had not been reset properly as data series was toggled which could result in "delayed" updates.
Fixed	3277	BarChart adapter	Updated to latest BarChart API to support exchange native timestamps.
Fixed	3279	Charts	Chart objects on first bar weren't displayed.
Fixed	3280	Charts	Bars # in display box of ruler chart object could be off when moving on equidistant charts, e.g. 1000 Volume.

Fixed	3281	Market Replay	Moving slider on MR with strategy active on non equidistant chart removed all executions and trade lines.
Fixed	3282	Basic Entry	Increase/Decrease buttons did not work as expected
Fixed	3284	Charts	Price marker was incorrectly formatted if on the left scale on not the 1st series added to the panel
Fixed	3285	Market Replay	Corrupted data files could result in an inability to connect
