

NinjaTrader Version 7.0.0.11 Beta Release 11 - March 18th , 2010

Status	Issue #	Category	Comments
Fixed	3493	eSignal adapter	Added \$TVOLQ to the list of non-supported instruments.
Fixed	3494	Session Manager	Pressing the Save button could cause exceptions.
Fixed	3495	Charts	@RVI indicator wasn't working properly for CalculateOnBarClose and realtime.
Fixed	3496	Strategy Analyzer	Data series parameter had not been saved if the results of an optimization on data series had been saved.
Fixed	3497	Session Manager	"CME US Index Futures ETH" session template was incorrect
Fixed	3498	Market Replay	Connecting to MR or rewinding could cause exception if there were charts opened with indicators on
Fixed	3499	IQFeed adapter	Now supports 2 digit year codes. !!! DTN/IQFeed users must use this version or later before March 31, 2010
Fixed	3501	NinjaScript Editor	Updated to latest version of the 3rd party editor component from ActiPro.
Fixed	3502	Strategy Analyzer	Summary tab did not always show correct values.
Fixed	3503	Strategy Analyzer	Hid detail tabs as "Instruments" tab is selected in Walk Forward mode.
Fixed	3504	Strategy Analyzer	"COMBINED RESULTS" could have had details tabs exposed.
Fixed	3505	Strategy Analyzer	"Combined results", "# of trades per day" was incorrect.
Fixed	3506	NinjaScript indicators	Multi plot indicators would cause exceptions as not all plots would be populated in each OnBarUpdate() call.
Fixed	3507	NinjaScript strategies	NS strategies having ToString() overwritten to return blank would not be listed on chart->right click->Strategy performance
Fixed	3508	BarChart.com adapter	Realtime timestamps for currencies had been 10min behind and could e.g. cause charts being off.
Fixed	3509	NinjaScript indicators	Multi series indicators could cause exceptions when added to a chart.
Fixed	3510	NinjaScript strategies	Restoring multi series NinjaScript strategies on restart could yield log errors, if the secondary series was one of those which required special Add... methods
Fixed	3511	NinjaScript strategies	Persisting NS strategies could result in StrategyUpdateJob errors - object not being tracked.
Fixed	3513	Charts	Changed candle chart style and open/close style to be painted thinner, allowing to have thinner bars, and set default to 3 instead of 2.
Fixed	3514	Strategy Analyzer	Chart trader enabled property was visible in chart properties in SA
Fixed	3515	Charts	Mini instrument selected could be used when switching of adding bar series or period type/value or instrument shouldn't be possible
Fixed	3516	Charts	VOL indicator could cause overflow exceptions.
Fixed	3517	T&S window	Reset on properties dialog did not reset to factory settings.
Fixed	3518	Basic Entry	"Set Default" on properties dialog did not work.
Fixed	3519	MBT adapter	Fixed bug on requesting historical data which would prevent NT working with new MBT Nav 11.5.0.5
Fixed	3520	Charts	Trade markers and executions could disappear from receiving chart on scrolling on sending chart with global cross hair

Fixed	3521	Chart Trader	Chart Trader orders were selectable even when out of panel (price higher max or lower min of panel)
Fixed	3522	Charts	Indicator labels were not displayed on non equidistant charts when last bar of base series was right from last visible bar
Fixed	3523	Charts	Anchor time of chart objects were displayed wrong in object properties dialogs if anchor were outside of handled range
Fixed	3524	General	Disconnecting while loading bars and reconnecting could crash NT.
Fixed	3525	PFGBEST.com adapter	Fixed a couple of issues related to block accounts. !!! An updated PFGBEST.com client is required from our website
Fixed	3526	PFGBEST.com adapter	Tools->Options->Ok would reset values on Accounts tab.
Fixed	3527	NinjaScript strategies	Multi-series NS strategies had not been properly synced up on their first few bars.
Fixed	3528	Chart	NT could crash when chart was opened with session definition with begin time or end time in daylight saving time
Fixed	3529	Market Replay	Executions in market replay could disappear when period value was switched
Fixed	3530	Strategy Analyzer	Walk Forward tab will now display trades for multi series strategies.
Fixed	3533	Charts	Daily bars on realtime were built incorrectly, breaking up on midnight instead of the session borders.
Fixed	3534	SuperDOM	SuperDOM did not update Instrument in Entry Parameters when changed via link button and instrument did not exist in combo box
Fixed	3535	Strategy Analyzer	Bar width settings in SA were not restored properly on several consecutive back tests.
Fixed	3536	Charts	Multi-series indicators has issues when going from historical to realtime data.
Fixed	3537	Session Manager	Spikes or a whole session with wrong offset could be built on merging contracts for first session of new contract.
Fixed	3538	NinjaScript Strategies	"Cancel exit/entry orders when strategy is disabled" did not work as expected as it could have left orders in "PendingCancel" and causing issues when reconnecting.
Fixed	3540	NinjaScript Editor	Context menu "Save" menu was not disabled on system indicators
Fixed	3542	Chart indicators	Indicators with a transparent plot color could cause an overflow exception on panels with a very small scale range
